

**ROEMEX**

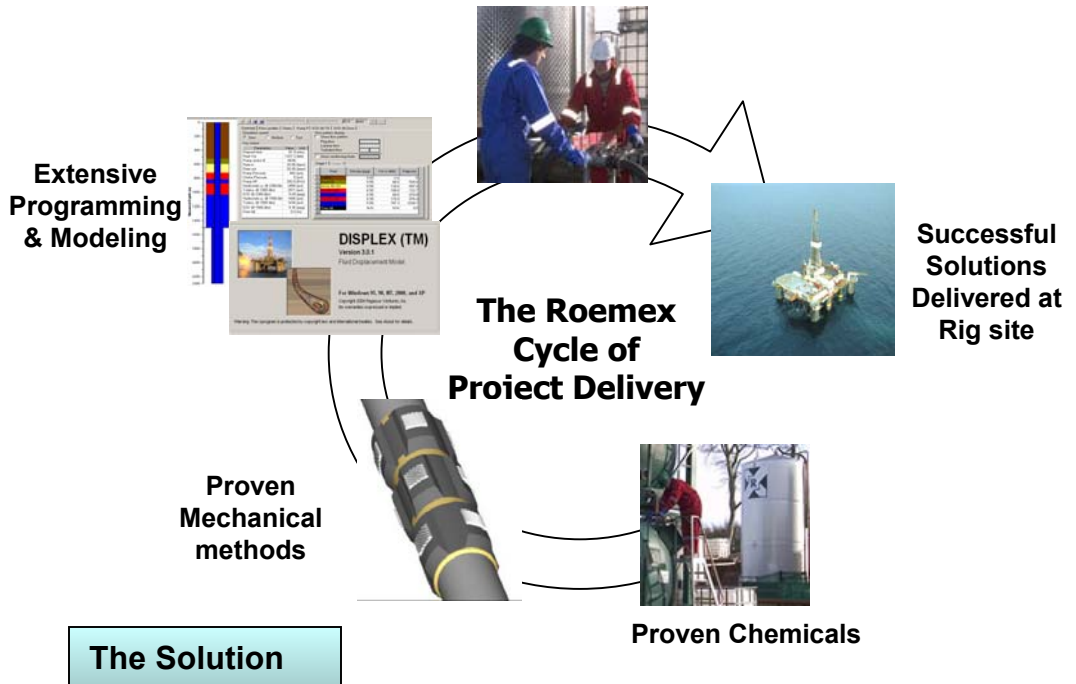

# **“Solutions Ownership”**

*Efficient Wellbore Cleaning Management – Every Time*

Since 1985 Roemex have supplied, supported and engineered wellbore clean up projects in locations throughout the world. Roemex have the unique ability to focus and dedicate their resources to this single important operation. Roemex engineer well bore clean ups to meet the customer and well needs, considering all factors that can determine the success of the operation. Demanding well conditions such as deep water, cold temperature in addition to difficult mud systems and strict environmental legislation, result in the need for an efficient well bore cleaning solution. To provide this solution a rich pedigree of experience and knowledge is required – Roemex can provide the solution.

Onsite ownership and interface

“Solutions Ownership” provides a comprehensive well bore clean up package that we believe is required in the industry today. The combination of tool and chemical supply in our well bore clean up package coupled with global engineering experience, enables Roemex to provide ownership of the clean up operation. In conjunction with the operator, Roemex will design and then manage the operation at the rig site to ensure all areas of the clean up are attended to – Pit Cleaning, Filtration, Pill Mixing, Operating Tools, Pumping, Sampling, Tool Inspection and Post Job Laboratory Analysis. This level of focus, enables Roemex to deliver a quality efficient well bore clean up solution.
