

NEWS RELEASE

PUMPING SERVICES JOB FOR CARILLION

S.C.O.R.E. Limited performed their first pumping services job for Carillion Construction (Caribbean) Ltd from September to October 2008.

S.C.O.R.E. management was notified on a Sunday night by Carillion Senior Engineers requesting pumping equipment for one of their construction project job sites.

We immediately mobilized our operations personnel and Hiab trucks to transport one 6" pump and one new 8" high rate centrifugal pump to the job site. We also provided the 6" & 8" suction/discharge hoses, crossovers, flapper valve and assorted fitting for the job.

S.C.O.R.E. personnel prepared a risk assessment for the job and held pre-job safety meetings each day to discuss all aspects of the pumping operation. All S.C.O.R.E. Limited personnel are very experienced and have P.L.E.A. certification to work in all industrial areas.

Our crews and equipment were on the construction site working twenty-four hours per day with personnel taking shifts for nearly two month.

The pumping rates were in excess of 1500gpm - 3000gpm.

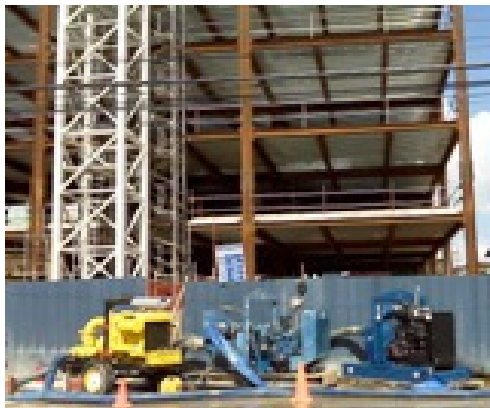

We remain committed to providing safe, affordable, top quality equipment and efficient service for our clients in the construction sectors of Trinidad and Tobago.

Actual pumps on location:

6" x 6" Gorman Rupp Pump

8" x 8" Gorman Rupp pump

SCORE pump units on-site
