PUMPING SERVICES JOB WITH BP TRINIDAD & TOBAGO LLC & NEAL & MASSY WOOD GROUP

S.C.O.R.E. Limited performed our first pumping services job for BP Trinidad and Tobago LLC in conjunction with Neal & Massy Wood Group offshore on the Amherstia gas platform in December 2008 – January 2009.

S.C.O.R.E. Limited was approached NMWG Senior Engineers to provide back-up high rate water pumping capabilities for their production facility emergency fire system.

We mobilized our operations personnel and prepared our equipment for certification to be used offshore. New spark arrestors were installed and certified lifting frames were fabricated on the pumps.

One 10" and one 8" high rate centrifugal pump with crossover fittings, equipment baskets and 200ft of hoses were sent to the Amherstia platform via boat from the BP Galeota Point facility.

The project duration was very extensive and our pumping equipment had to be lowered on the Production deck and hoses lowered into the ocean. Everything worked as designed and personnel performed their jobs safely. The pumping rates were in excess of 2500gpm.

In the end the client stated they were very pleased with our support as SCORE Limited was the only company to respond in a timely manner during the Christmas week as most other companies were closed for the holidays.

We remain committed to providing affordable, top quality equipment and service for our clients in the energy sector offshore of Trinidad and Tobago.
