

## NEWS RELEASE

### LINER HANGER SYSTEM AND CEMENTING HARDWARE FOR PETROTRIN

---

In September 2010, S.C.O.R.E. Limited was appointed as the agent and representative in Trinidad and Tobago for Allamon Tool Company Inc. This alliance affords S.C.O.R.E. Limited the opportunity to offer our clients the highest pressure rated Liner Hanger tools and most successful Diverter tool available in the oil industry worldwide!

Due to this alliance and, as fate would present itself, S.C.O.R.E. Limited was approached by our client Petrotrin to provide a Liner Hanger tool at short notice for one of their land wells in South Trinidad.

S.C.O.R.E. was subsequently awarded a contract to supply the Petroleum Company of Trinidad and Tobago (Petrotrin) our Liner hanger tool, float equipment, cement head/plug dropping manifold and centralizers for the well structure design.

We had to mobilize all of our team's resources since the equipment had to be air-freighted into Trinidad. This operation was done safely, the liner and running tool was assembled, torque and pressure tested and we delivered our equipment to the client in a timely manner.

Prompt response, technical support, quality assurance and deliverability are the key to S.C.O.R.E. Limited's continued success in the down-hole tool market!
