

Safe to Work

S.C.O.R.E. Limited obtained STOW certification in March 2011.

STOW-TT Background

In 2003/04 The Energy Chamber of Trinidad researched the challenges companies faced to meet the range of health, safety and environmental (HSE) requirements among the major oil and gas operating companies. This lack of standards made it difficult for local service companies to fully explore business opportunities in Trinidad and Tobago's leading industry.

At the time, each upstream and downstream operating company managed contractor safety through their own company specific HSE requirements, usually adopted from the parent company abroad. While this approach worked for the operating company, it stifled the attempts of local contractors to offer their services to more than one operating company at any given time, mainly due to the cost factor for meeting the different requirements.

In 2005, the Energy Chamber developed the STOW-TT project identifying the need for consensus on the HSE requirements to prequalify service contractors across Trinidad and Tobago's energy industry. STOW-TT certification is being implemented in collaboration with the upstream companies of the Association of Upstream Operators of Trinidad & Tobago (AUOTT) and the downstream companies of the Point Lisas Energy Association (PLEA).

The Government of Trinidad and Tobago through the Ministry of Labour, the Occupational Safety and Health (OSH) Authority and the Trinidad and Tobago Bureau of Standards.
